## EXPERIENCE [3.4 YRS]

- **Sony (Playstation) [3 mon]** San Francisco, CA  
*Software Development Intern* | **java, spring, kafka, grafana, grpc, no-sql, cassandra** May 2022 - Present
  - Working on a publisher service which publishes hints to the online PS5 users dynamically based on the game context
  - Porting monolith news publisher service into micro services using gRPC based custom built framework
  - Building grafana analytical dashboards to visualize service performance charts derived from over 100M active users
- **Brave Orbit [1.6 yrs]** (Remote) Capetown, South Africa  
*Full Stack Developer* | **django, dart, flutter, pytest, redis, celery, gcp, k8s** Jan 2020 - Aug 2021
  - Developed a cross-platform app using BLoC pattern, implemented database, network and state management layers
  - Engineered HIPAA compliant scalable async push notification service for medication reminder application
  - Developed a task scheduler for clinical surveys that delivers email, SMS alerts and gathers response on a recurring basis
  - Developed a ERP system, custom features such as multi-product substitutions, combo-products are developed
  - Kubernetes CI/CD workflows were setup to automatically test, build and deploy backend services on cloud
  - Developed automated testing pipelines and improved test coverage for both frontend and backend services
- **Accenture [1.3 yrs]** Bangalore, India  
*Big Data Developer* | **postgres, redshift, pyspark, pandas, aws, distributed-computing** Sep 2018 - Dec 2019
  - Time series analysis was conducted on drug assay data to identify raw materials that effect the drug quality
  - Designed ETL data validation pipeline using micro service architecture; Manual testing resources were cut by 70%
  - PL/SQL procedures were developed to generate parent child hierarchies using temporal drug life cycle data
- **Visakhapatnam Port Trust [3 mon]** Visakhapatnam, India  
*Computer Vision Intern* | **opencv, numpy, video processing, scikit-learn** May 2017 - July 2017
  - Extracted frames from surveillance cameras; merged them based on SIFT keypoints and RANSAC; trained a SVM to detect cargo type and estimate lease area; developed a motion detector model to identify suspicious movements

## PROJECTS

- **Recommender system using graph neural networks | gnn, deep-learning:** Developed an inductive matrix completion model using user-item node embeddings pretrained on movie reviews; 1-hop sub graphs around user, item pairs are generated and passed to MLP regressor to forecast ratings
- **Computer vision based vehicle damage detector | backend, rest-api, django, pytorch:** Trained an instance segmentation model using detectron2 to detect damages; assigned a health score based on relative area of damage
- **Unordered image stitching and deghosting | image matching, data structures:** Estimated approximate overlap area by minimum variance technique on binarized images; stitched images based on binary tree model; removed deghosting from the overlap areas by selecting regions based on minimum local gradients
- **Information extraction as seq2seq task | nlp, transformer, text2text:** Transformed labelled structured data into text; finetuned T5 model to generate text and extracted entities using REGEX
- **Abstractive text summarization of tabular data | nlp, transformer, text2text:** Flattened tables into sequence of words, preserved structure using key:value format; Explored application of text-to-text models to generate ACLED style summary of news articles
- **Microservice based deeplearning inference pipeline | docker, cloud-run, automation:** Created face mask dataset and trained a multi class classification network; Exposed ResNet model in a docker container; setup automated CI/CD pipeline to build and deploy as serverless REST API
- **Reinforcement learning based crypto trading bot | time series, rl:** Designed a continuous action space OpenAI gym environment to handle trading data; LSTM with CNN was used as function approximator to actor critic algorithms
- **Custom built autonomous car | full-stack, mobile-app, vision, webrtc:** Assembled the car with Jetson Nano; Cross-platform mobile app was build to control the bot; Implemented WebSockets to exchange sensor data and WebRTC protocol to stream video to the controller; Applying RL/DL algorithms to make it autonomous
- **Open-source contributions | open-source, nlp:** Core contributor to HuggingFace Datasets official repository

## RELEVANT SKILLS

Python, SQL, JAVA, Django, Flask, PyTorch, PySpark, Docker, K8s, Git, NumPy, OpenCV, Pandas, GCP, AWS

## EDUCATION

- **University at Buffalo [3.95/4.0 GPA]** Buffalo, NY  
*Master of Science in Computer Science (AI/ML Specialization)* Sep 2021 - Present  
*Courses:* Data Structure & Algorithms, Computer Vision, NLP, Deep Learning, Big Data Systems, Reinforcement Learning  
*Research:* Working at A2IL lab on projects related to NLP and CVIP, advised by Prof. David Doermann
- **National Institute of Technology, Durgapur [3.3/4.0 GPA]** West Bengal, India  
*Bachelor of Technology in Computer Science and Engineering* July 2014 - May 2018  
*Courses:* Operating Systems, Computer Architecture, Networking, Database Management Systems, Compilers, Digital Image Processing  
*Thesis:* Gender Classification using CNN advised by Dr. Dakshina Ranjan Kisku

## PUBLICATIONS

- **Time series analysis of civil unrest using Graph Neural Networks @ COLING 2022 (In Review):**
