Vinay Kudari https://vinaykudari.me

EDUCATION

• State University of New York at Buffalo

Master of Science in Computer Science

Buffalo, NY

Sep. 2021 - Present

• National Institute of Technology, Durgapur

Bachelor of Technology in Computer Science and Engineering

West Bengal, India
July 2014 - May 2018

* Gender Classification Using CNN – Graduate Thesis under Dr. Dakshina Ranjan Kisku

- Implemented Gil Levi and Tal Hassner's deep neural network architecture in PyTorch, tweaked the network layout, and evaluated various second-order optimisation techniques such as Newton and Quasi-Newton algorithms
- \circ Retraining the model with different dataset resolutions resulted in an 86.3% accuracy

SKILLS

• Languages: Python, SQL, Bash, Dart, JavaScript

• Scientific Libraries: Pandas, NumPy, Matplotlib, Scikit, SQLAlchemy

Tools: Docker, Compose, Kubernetes, PostgreSQL, Redis, Sentry
 Frameworks: Django, Flask, Flutter, PyTorch, PySpark, FastAI, OpenCV

• Cloud: GCP, Heroku, AWS

EXPERIENCE

• Brave Orbit

Capetown, South Africa

Jan. 2020 - Aug. 2021

Software Development Engineer (Full-time)

- Assisted in re-developing a popular healthcare app into a cross-platform mobile application using Flutter. Involved in features such as setting up BLoC, database and network layers
- o Designed & developed HIPAA compliant scalable push notification service for a medication reminder app
- Implemented an API on top of the NIH and MPR APIs to retrieve medication data and interactions. Caching was set up to improve the performance of API calls
- o Developed a clinical surveying platform that sends out email and SMS alerts to patients and collects feedback periodically
- Lead a team in developing a custom ERP system using Django for a supermarket that was critical in helping them survive a 5X growth due to the COVID-19 outbreak
- o Orchestrated docker container cluster using Kubernetes and CI/CD pipelines were setup to deploy on GKE
- Setup NGINX reverse proxy server with SSL to forward the traffic to services based on the sub-domain

• Accenture

Bangalore, India

Advanced Application Engineering Analyst (Full-Time)

Sep. 2018 - Dec. 2019

- Transformed large volumes of drug life cycle data and hierarchies of drug materials were generated using PL/SQL procedures on a multi-node Redshift cluster
- Performed trend analysis on drug potency data using PySpark on a EMR cluster to find the performance variability of drug analytical methods. Several statistical measures are performed and colour coded control charts are visualised on a spotfire dashboard
- Assisted in designing and development of an automated data validation ETL pipeline leveraging microservice architecture to validate data across a wide range of data sources that resulted in 70% effort reduction and 75% cost saving on infrastructure

• Vishakapatnam Port Trust

Visakhapatnam, India

Software Intern (Full-Time)

May 2017 - July 2017

- \circ Developed a prototype for a computer vision-based monitoring solution for the port cargo handling area
- o Created datasets and trained the model using support vector machine (SVM) to identify cargo lease area and cargo type

Relevant Projects

• DeepJet Autonomous Car (work in progress)

code

- o Assembled the car with Jetson Nano as its brain. Implemented WebSocket to exchange data with the controller
- o Cross-platform mobile app was build to control the car. WebRTC protocol is used to receive real-time camera feed

• Mask Detection REST API

 \mathbf{code}

- Built a server-less deep-learning API service using Django REST Framework to classify images into 3 buckets (with mask, without mask, improperly worn mask)
- o CI/CD pipeline was setup to automatically build the docker container and deploy in Cloud Run
